General

TSIMUN Committees

- CSTD (Commission on Science and Technology for Development)

MUN Procedures

- Committee Session
    1) Roll Call
        - All countries called, delegate responds with “Present” or “Present and Voting”
    2) General Speaker’s List
        - Chosen delegates give opening speech
    3) Moderated Caucus
        - Speaking rules apply
    4) Unmoderated Caucus
        - Informal session, delegates can walk around and talk to other delegates
    5) Drafted Resolutions
        - Done with multiple delegates
    6) Voting
        - Delegates vote for best resolution

MUN Terminology

- Moderated Caucus
    - Short statements/comments from delegates on sub-issues
    - If someone wants to speak on the subject, they must raise their placard and wait for the chair to call on them
- Unmoderated Caucus
    - Free movement
    - Talk to other delegates
    - Form alliances
    - Brainstorm resolutions

- Floor
    - Opportunity to speak
- Motion
    - Suggest an action
        - Extend debate time
        - Vote on resolutions
- Second
    - Agree with another delegate's motion
- Objection
    - Disagree with another delegate's motion
- Abstain
    - If a delegate is unsure about their vote they can choose not to say yes or no definitively
        - Does not fully agree
        - Agrees enough not to vote against

MUN Points

- Question or suggestion made by a delegate to the chair
- Usually regarding their comfort
- Types of points :
    - Point of Order
        - Objection to a procedure
        - The chair has made a mistake
        - Parliamentary Procedures are not done correctly
        - Must be made
        - Must say point of order whilst raising their placard
        - May interrupt a speaker who has the floor

- Point of Inquiry
    - For clarification
- Point of Information
    - To add onto another speaker statement/resolution
    - To bring down the resolution
    - Must be formulated as a short question
    - May NOT interrupt speaker who has the floor
    - Must be directed to the chair, even though it is aimed at the speaker
    - Max 2 times
- Point of Personal Privilege
    - When a delegate feels uncomfortable
    - Room too hot / too cold
    - May interrupt speaker to request for change in atmosphere
- Point of Parliament Inquiry
    - Point of info directed at chair regarding the rules of procedure

Committee Overview

CSTD Overview

- Committee Summary : In the Commission on Science and Technology for Development (CSTD), the debate over AI ethics shifts from theoretical philosophy to practical, global development. Delegates are tasked with bridging the "AI Divide" by establishing a framework that ensures artificial intelligence serves as a tool for progress rather than a driver of global inequality. The focus is on creating human-centric standards that address algorithmic bias, data sovereignty, and the environmental costs of "compute" power. By balancing the need for rapid innovation with the protection of human rights, the committee aims to ensure that the benefits of AI are transparent, inclusive, and accessible to the Global South, aligning the technology with the 2030 Sustainable Development Goals.
- Agenda :
    - Topic 1 - The Question of Establishing Ethical Frameworks for the Global Use of Artificial Intelligence.
- Committee Allocations
    - Australia
    - Brazil
    - Canada
    - China
    - Finland
    - France
    - Germany
    - India
    - Japan
    - Netherlands
    - Singapore
    - South Korea
    - Spain
    - Switzerland
    - United Arab Emirates
    - United Kingdom
    - United States of America

Key Terms

Key Terms

- Key Terms (Topic 1)

Key Terms (Topic 1)

Key Terms (Topic 1)

Term	*Category*	*Definition*
Algorithm	***AI Fundamentals***	• Set of rules or instructions given to AI to help it learn or solve problems
Machine Learning (ML)	***AI Fundamentals***	• Subset of AI where systems learn from data patterns instead of explicit programming
Generative AI (GenAI)	***AI Fundamentals***	• AI capable of creating new content (text, images, code) based on training data
Deep Learning	***AI Fundamentals***	• A complex ML technique using neural networks to mimic human decision-making
Black Box Problem	***AI Fundamentals***	• The lack of transparency in how complex AI models arrive at specific decisions or outputs
Algorithmic Bias	***Ethics & Human Rights***	• Systemic errors in AI output that create unfair outcomes, often reflecting the human prejudices in the training data
Data Sovereignty	***Ethics & Human Rights***	• The principle that a country has the right to control the data generated within their borders
Digital Divide	***Ethics & Human Rights***	• The gap between demographics and regions that have access to modern information technology and those that don't
Right to Explanation	***Ethics & Human Rights***	• The right for individuals to receive an explanation for a decision made by an automated system
Informed Consent	***Ethics & Human Rights***	• Ensuring users understand how their data is being used by AI systems before agreeing to use them
Soft Law	***Governance, Regulations, and Frameworks***	• Non-binding instruments (like the UNESCO Recommendation on the Ethics of AI) that guide state behaviour without legal penalties
Hard Law	***Governance, Regulations, and Frameworks***	• Legally binding treaties or national regulations (like the EU AI Act)
Regulatory Sandbox	***Governance, Regulations, and Frameworks***	• A controlled environment where companies can test AI innovations under oversight before full market release
Multistakeholder Approach	***Governance, Regulations, and Frameworks***	• A governance model that includes government, the private sector, civil society, and academia
Interoperability	***Governance, Regulations, and Frameworks***	• The ability of different AI systems and regulatory frameworks to work together across borders

The Precautionary Principle	***Governance, Regulations, and Frameworks***	• The idea that if an AI innovation has a high risk of causing harm, the burden of proof falls on the developers to show it is safe
Human-in-the-Loop (HITL)	***Accountability & Safety***	• A model where AI assists humans, but a human must approve or intervene in the final decision
Liability Framework	***Accountability & Safety***	• Rules determining who is responsible (developer, user, or owner) when an AI system causes harm
Explainable AI (XAI)	***Accountability & Safety***	• AI developed specifically so that its processes are results can be understood by human experts
Kill Switch/Redlining	***Accountability & Safety***	• Emergency protocols to shut down an AI system if it behaves uncontrollably or unethically
Dual-Use Technology	***Accountability & Safety***	• AI that can be used for both peaceful/civilian purposes and harmful/military purposes
Technological Unemployment	***Socio-Economic Impact***	• Job loss caused by AI automation and the displacement of human labor
Universal Basic Income (UBI)	***Socio-Economic Impact***	• A proposed policy to provide a regular payment to all citizens (to offset the economic disruptions of AI)
Capacity Building	***Socio-Economic Impact***	• Efforts to help developing nations gain the skills, infrastructure, and legal frameworks to use AI safely.
Data Colonialism	***Socio-Economic Impact***	• The practice of large tech powers extracting data from developing nations without providing equitable benefits
Autonomous Weapons Systems (AWS)	***Security & Existential Risks***	• AI controlled military hardware that can select and engage targets without human intervention • “Killer Robots”
Deepfakes	***Security & Existential Risks***	• AI generated media that convincingly replaces one person's likeness or voice with another • Often used/abused for misinformation
Artificial General Intelligence (AGI)	***Security & Existential Risks***	• A theoretical version of AI that can perform any intellectual task a human can
Alignment Problem	***Security & Existential Risks***	• The challenge of ensuring an AIs goals and behaviours perfectly match human values and intentions
UNESCO Recommendation (2021)	***Global Governance***	• The first global standard-setting instrument on AI ethics.
Bletchley Declaration	***Global Governance***	• A 2023 agreement focusing on “Frontier AI” safety and international cooperation

The UN AI Advisory Body	***Global Governance***	• A group formed to provide recommendations on international AI governance

United States of America		

Blocs

Bloc A :

Germany

Germany

- Market Size :
    - 2025 : Estimated at $12.18 billion
    - 2032 : Projected to reach $54.7 billion
- 17% of manufacturing companies have fully implemented AI
- 40% of manufacturing companies are in the piloting stage of AI implementation
- Public trust increased by 10% after the implementation of transparency frameworks
- Investments :
    - Federal government invested €1.6 billion throughout 2025
    - Oracle/Microsoft invested $3+ billion in German AI infrastructure (from 2024-2025).
- 13% of the workforce possesses AI-relevant skills
    - Significant in Europe
    - Behind the US (26%)

- EU AI Act
    - Implemented originally in August 1st of 2024
    - Full enforcement will begin on August 2nd of 2026
    - Oversight is carried out by the Federal Network Agency (Bundesnetzagentur - BNetzA)
        - Surveillance on AI markets
        - Center for all concerns and notifications
    - As of February 2025, Germany banned AI for :
        - Social Scoring
        - Biometric Mass Surveillance
        - Emotion Recognition in Workplaces/Schools
    - As a part of a currently pending national bill (of 2025) violations of the AI Act will result in :
        - Fines up to 7% of global turnover

- Germany remains at the forefront of Road Safety in regards to automation.
    - The 2021 amendment allows individuals to travel via (Level 4) autonomous driving (fully automated) vehicles – on public roads within defined zones

- Germany has implemented a Digital Healthcare Act (DVG) to regulate “DiGAs” (Digital Health Applications)
    - Ensures any AI used in patient diagnostics meets the strict criteria for reliability before being allowed reimbursement from insurers.

- Germany also recognizes the need for jurisdiction over ideas, therefore rules that while AI may assist in the development of an invention – a human must be named as the inventor and intellectual property owners.

- Germany's AI Action Plan (2023) highlights "Human-Centric AI." Focusing on:
    - Maintaining Human Dignity through explicit instructions for AI to not treat humans as objects or data points in respect to individualism and personal privacy.
    - The "Right to an Explanation" for all automated decisions (aligned with GDPR Art. 22), declaring any user has the right to request and receive an explanation as to how the decision or output came to be

- Developed by the DIN (German Institute for Standardization), the blueprint for AI ethics is as follows :
    - Designing for ethical use requires developers to include bias-detection and transparency features during the development process
    - Germany has established a trustworthy standard that allows them to guarantee that all "AI Made in Germany" is reliable and free of biases.

- BaFin Supervisory Principles

- Main ethical issues with AI :
    - Public Biometric Surveillance
        - Violates the right to anonymity in public spaces
        - Exceptions for national security systems (such as at airports)
    - The "Black Box" in the German Legal System
        - Due to the potential for exploitation by criminals, the specific algorithms used to sentence and flag individuals is considered intellectual property and is protected to ensure there are no immoral attempts of dismissing legal fault.
    - Industrial Sexual Harassment (Deepfakes)
        - AI has become capable of creating extremely high quality images and videos, this expands options for content creation but also poses an extreme risk for the use of nudity without the subject's consent – whether for celebrities or a colleague.
    - Sovereign AI & Geopolitics
        - Many nations are competing to develop and maintain the gold standard AI system with various attempts of improving the infrastructure. Due to this competition, there is the potential for corruption in training data that is designed to target an opposing nation.
    - The Global South & Data Colonialism
        - The idea that the source of servers exist in less developed countries but are responsible for generating incredible amounts of revenue for first world nations where the hosting nation is provided with little to no compensation for the potential environmental impact.
    - AI in Warfare
        - The ability for AI to fully control weapons is a dangerous prospect and one that must be addressed immediately.
        - Weapons capable of killing should never be operated without human oversight and require human approval for any weaponization attempt.

- Accountability
    - Fault for damages or legal violations is highly debated whether or not the owner, developer, or nation itself is responsible for the outcome.
    - Are the consequences of the violation due to a lack of legal clarity, systematic errors, or user errors?
- Copyright
    - Are AI developers responsible for paying copyright fees for the use of human-made inspiration and exact content in AI art and content?
    - Are the individuals requesting the image responsible for copyright infringement?
    - Are the individuals only responsible for the copyright infringement given that they use the content for commercial purposes?
- Job Displacement
    - Addressing the impact of AI on employment opportunities is necessary to ensure our society is developing and assigning value to skills needed to work alongside and in harmony with AI as opposed to against AI or instead of AI.
- Environmental Cost
    - Mass energy and water consumption by AI data servers are creating major setbacks in targets for environmental health.

BaFin Supervisory Principles
The Federal Financial Supervisory Authority (BaFin) released specific principles for AI in banking:

Algorithm Responsibility: Boards are legally responsible for AI "hallucinations" or errors that cause financial loss.

Transparency: Customers must be informed if a loan or insurance premium was decided by an algorithm.

Economic & Social Factors

Economic & Social Factors

Opening Speech & Position Paper

Opening Speech

Honorable Chair, Distinguished Delegates, The impact of artificial intelligence on privacy, security, safety, and the environment is a high-risk reality that demands immediate, comprehensive and collaborative resolutions. Germany advocates for a UN-facilitated global template in order to replace the multitude of national laws. We believe AI must be human-centric, designed for the greater good, free of bias, and devoid of mass surveillance. Through the pioneering of the EU AI Act, Germany has proven that innovation and accountability can coexist. As the first nation to provide legislation on Level 4 autonomous vehicles, we require strict oversight implemented through "security-by-design" and user education. However, to address AI as a whole, Germany must look beyond our borders. Thus, Germany proposes several critical initiatives including: the establishment of 10 UN regional bodies to review AI training data, ensuring systems reflect cultural values rather than global biases, a system of fees for remote server use — including an annual 1% revenue fee to UNEP and a one-time €1 million investment into a technological institution of a hosting nation to compensate for the lack of data sharing. Simultaneously, Germany remains committed to "AI Made in Germany" as a global standard for reliability. We urge the CSTD to ensure that as humanity advances technologically, relevant bodies are not leaving the Global South or our ethical principles behind. Thank you.

Position Paper

Germany - CSTD

Resolution Ideas

Resolution Ideas

- Continued prohibition of biometric surveillance in public spaces with the exception of national security measures (such as in airports and targeted searches for missing or wanted persons).
- Frameworks around legal advice
    - Complies with the UN Declaration of Human Rights (Article 11: Right to be presumed innocent).
    - Any persecution or flagging must be reviewed and approved by a human
    - Any mistakes in persecution or identification will require a formal complaint to a regulatory board (Fault AI) – The board will determine the appropriate course of action:
        - Platform deletion
        - Platform suspension and probation
        - Developer ban
    - Individuals seeking circumstantial legal advice (requiring the provision of private data such as employment and contractual info.) via AI are required to submit a form of identification (which will then be deleted to maintain client-attorney privilege) to verify their age to ensure the capacity to understand and act accordingly.
        - Known criminals may be refused service by the system if flagged as a dangerous individual (either currently registered in prison or has a pattern of recurring behaviour) :
            - Someone who has committed a crime resulting in intentional death or harm
            - Someone who has engaged in trafficking
            - Someone who has engaged in embezzlement and fraud
        - Individuals who have been flagged are given contact information for a human lawyer or legal representative to ensure a just judicial system
        - The list of known criminals will be manually updated to ensure a lack of bias.
    - All legal queries and outputs by official AI legal systems must be reported to a cooperative board (Judge A.I.)
- All generative AI platforms must adhere to the guidelines below :
    - The use of celebrities and public figures in AI content is strictly prohibited and will not produce content if prompted with either a name or an image of restricted identities – journalists may use specialized platforms that protect celebrity dignity.
    - No nudity may be produced by AI – this will result in legal action against the developers and possibly the prompt giver (depending on the extent of the request)
    - Applications must be developed in accordance with the AI platforms to recognize AI generated content and highlight it as such.
        - ***C2PA standard***
- AI systems must meet the following criteria :
    - The purpose of the system is without relation to the desires of the responsible nation
        - The purpose aligns with the statement “AI is a tool for the safety and benefit of all”
    - The training data is subject to review upon request by a regional governing body upon registration of the service :
        - Americas
            - North America : NATDRB (North American Training Data Review Board)
            - South America : SATDRB (South American Training Data Review

Board)
        - Asia
            - South-East Asia : SEASTDRB (South-East Asian Sector Training Data Review Board)
            - Central Asia : CASTDRB (Central Asian Sector Training Data Review Board)
            - South Asia : SASTDRB (South Asian Sector Training Data Review Board)
            - East Asia : EASTDRB (East Asian Sector Training Data Review Board)
            - West Asia : WASTDRB (West Asian Sector Training Data Review Board)
        - Africa : ATDRB (African Training Data Review Board)
        - Europe : ETDRB (European Training Data Review Board)
        - Oceania : OTDRB (Oceanian Training Data Review Board)
    - All regional boards work under the UN and are legally binding for the purpose of determining punishments in the case of violations and severe humanitarian or environmental impact.
    - AI systems may not collect data of any user not signed in
    - AI systems must assess the data provided and determine whether it is valuable before asking for formal consent to utilize the data for development and improvement purposes.
    - AI systems approved by any of the aforementioned boards (NATDRB, SATDRB, SEASTDRB, CASTDRB, SASTDRB, EASTDRB, WASTDRB, ATDRB, ETDRB, OTDRB) are automatically approved to be implemented in other countries with a brief single person approval to ensure cultural relevance in training data.
    - Cultural relevance is defined as the implementation of historical context (of which can be proven), cultural norms and standards into the style of responses and content provided as well as the sources used for information compilation.
- All AI servers must be located in the same location/area as the registered developers to prevent unfair environmental depreciation
    - OR AI developers using servers outside of the registered nation must pay $0.052 per kilowatt-hour (as proposed by the IMF) to the hosting nation
        - Alongside 1% of the annual product revenue donated to UNEP to continue developing systems to reduce AI environmental impact.
        - AI servers located outside of the developer location, must also provide a one time donation/fee (of €1 million) to a national AI/technology institution of their choice to compensate for the lack of data sharing.
- LAWS are strictly prohibited in all contexts to prevent possible deaths due to systematic errors or miscalculations.
    - AWS that are not capable of killing may be used in certain environments (under oversight from federal bodies) such as a high-security prison, psychiatric ward, or hospitals under strict security due to surrounding conflicts but must prioritize de-escalation in all circumstances and is a last resort only present after bypassing several other security measures.
        - The systems used must be approved by both the UN and the national governing body.
        - These systems must have 24/7 human surveillance to prevent errors.
        - If systems detect large groups, a manual order to engage the system must be made
- The responsibility for AI systems resulting in violations or damages is as follows:
    - High Risk Systems : Developer fault
        - Indicates a lack of safeguards

    - Mid-Low Risk Systems : National &/or User fault
        - Lack of legal frameworks & user manuals
    - No-Risk Systems : User fault
        - Lack of public awareness of AI risks
    - Humanitarian damages may require further assessment via a consultation of the CSTD
- AI systems generating content based on or containing human-made work must credit the original artist and pay up to $3000 to each artist if content is used without consent
    - Artists are encouraged to form paid contracts with AI systems to provide a unique art style to the database while respecting the efforts taken to create the work.
    - AI generated content used for commercial purposes is strictly prohibited without proper accreditation of the inspiring artists, users of the content may face fines up to $3000 if they failed to accredit the work.
    - AI systems are required to inform individuals of the origin of style for the content – original artists
    - AI systems are required to inform individuals regarding the appropriate use of content and accreditation to prevent copyright infringement.
- AI systems aiming to replace human workers must be approved by the national working council. AI systems must provide a comprehensive report of the possible impacts on employment, the economic impact, the benefits, and the disadvantages of implementing the system.
- AI training is encouraged for all adults and adolescents and may be covered by companies or considered approved paid leave for upskilling purposes
- AI literacy should be offered as a subject in all high schools with the aim to provide students with the ability to :
    - Know when to trust AI
    - Know where to use AI
    - Knowing how to use AI
- AI taxation and social funding : AI companies are mandated to pay 5% of their annual revenue to the government to aid in universal services such as education, healthcare, and shelter.
- AI systems are required to disclose when using AI for labor related decisions.

    - AI generated content used for commercial purposes is strictly prohibited without proper accreditation of the inspiring artists, users of the content may face fines up to $3000 if they failed to accredit the work.
    - AI systems are required to inform individuals of the origin of style for the content – original artists
    - AI systems are required to inform individuals regarding the appropriate use of content and accreditation to prevent copyright infringement.

- All AI servers must be located in the same location/area as the registered developers to prevent unfair environmental depreciation
    - OR AI developers using servers outside of the registered nation must pay $0.052 per kilowatt-hour (as proposed by the IMF) to the hosting nation
        - Alongside 1% of the annual product revenue donated to UNEP to continue developing systems to reduce AI environmental impact.
        - AI servers located outside of the developer location, must also provide a one time donation/fee (of €1 million) to a national AI/technology institution of their choice to compensate for the lack of data sharing.

- LAWS are strictly prohibited in all contexts to prevent possible deaths due to systematic errors or miscalculations.
    - AWS that are not capable of killing may be used in certain environments (under oversight from federal bodies) such as a high-security prison, psychiatric ward, or hospitals under

strict security due to surrounding conflicts but must prioritize de-escalation in all circumstances and is a last resort only present after bypassing several other security measures.
        - The systems used must be approved by both the UN and the national governing body.
        - These systems must have 24/7 human surveillance to prevent errors.
        - If systems detect large groups, a manual order to engage the system must be made
- Autonomous Weapons Systems (AWS) are :
    - Lethal Autonomous Weapons Systems (LAWS) are strictly prohibited in ALL contexts
    - Autonomous Weapons Systems (AWS) that CANNOT kill may be used (with the case-by-case approval of the UN and national governing body) under the following strict circumstances with de-escalation being the priority:
        - 24/7 human surveillance of the system to prevent errors
        - Upon the detection of a large group, a manual order must be submitted to enable the non-lethal weapon
        - (Rural) High-security prisons (as a last resort, outside prison gates)
        - (Rural) High-risk psychiatric wards/hospitals (as a last resort, outside the hospital fences)
        - Hospitals in regions of conflict (as a last resort, only when the hospital is under attack)

- The responsibility for AI systems resulting in violations or damages is as follows:
    - High Risk Systems : Developer fault
        - Indicates a lack of safeguards
    - Mid-Low Risk Systems : National &/or User fault
        - Lack of legal frameworks & user manuals
    - No-Risk Systems : User fault
        - Lack of public awareness of AI risks
    - Humanitarian damages may require further assessment via a consultation of the CSTD
- AI taxation and social funding : AI companies are mandated to pay 5% of their annual revenue to the government to aid in universal services such as education, healthcare, and shelter.

- AI usage towards developer should be heavily regulated to ensure developer do not include morally incorrect or illegal product/services by
    - All LLMs request through web app, terminal CLI, API, or open sources project must have up-to-date AI regulations
    - If an inappropriate request is sent then LLMs must reject the request immediately, and inform Cyber Police when possible if the request is Terroritist/Nudity/Other illegal activities
    - Other Niche AI tools including Text to Image, Image to video, Text to video, Text to voice, voice to voice are required to follow the following regulations: No physical violences, Cyber Bullying, Nudity, Include celebrity voice/face without their permission, inappropriate social media “memes”, Conspired politics, Illegal activities such as drugs etc.

Privacy & Security

Privacy & Security

- Biometric surveillance is prohibited in ALL public spaces with the exception of national security measures (such as airport security)

- Autonomous Weapons Systems (AWS) are :
    - Lethal Autonomous Weapons Systems (LAWS) are strictly prohibited in ALL contexts
    - Autonomous Weapons Systems (AWS) that CANNOT kill may be used (with the case-by-case approval of the UN and national governing body) under the following strict circumstances with de-escalation being the priority:
        - 24/7 human surveillance of the system to prevent errors
        - Upon the detection of a large group, a manual order must be submitted to enable the non-lethal weapon
        - (Rural) High-security prisons (as a last resort, outside prison gates)
        - (Rural) High-risk psychiatric wards/hospitals (as a last resort, outside the hospital fences)
        - Hospitals in regions of conflict (as a last resort, only when the hospital is under attack)
- Human labor redundancies must be considered in all situations to prioritize human dignity and livelihood, requirements for AI systems causing human redundancy are as follows :
    - AI developers and implementing companies must provide a comprehensive report of the possible impacts on employment, economics, and the benefits and disadvantages of implementing the system – proposing a plan for all redundant employees to either maintain their benefits or refer and promote employees to new employers until the redundant employee has been re-employed.

- AI Upskilling :
- AI Education :
- AI Taxing :

- AI training is encouraged for all adults and adolescents and may be covered by companies or considered approved paid leave for upskilling purposes
- AI literacy should be offered as a subject in all high schools with the aim to provide students with the ability to :
    - Know when to trust AI
    - Know where to use AI
    - Knowing how to use AI
- AI taxation and social funding : AI companies are mandated to pay 5% of their annual revenue to the government to aid in universal services such as education, healthcare, and shelter.
- AI systems are required to disclose when using AI for labor related decisions.

Legal & Healthcare

Legal & Healthcare

- Frameworks around legal advice
    - Complies with the UN Declaration of Human Rights (Article 11: Right to be presumed innocent).
    - Any persecution or flagging must be reviewed and approved by a human
    - Any mistakes in persecution or identification will require a formal complaint to a regulatory board (Fault AI) – The board will determine the appropriate course of action:
        - Platform deletion
        - Platform suspension and probation
        - Developer ban
    - Individuals seeking circumstantial legal advice (requiring the provision of private data such as employment and contractual info.) via AI are required to submit a form of identification (which will then be deleted to maintain client-attorney privilege) to verify their age to ensure the capacity to understand and act accordingly.
        - Known criminals may be refused service by the system if flagged as a dangerous individual (either currently registered in prison or has a pattern of recurring behaviour) :
            - Someone who has committed a crime resulting in intentional death or harm
            - Someone who has engaged in trafficking
            - Someone who has engaged in embezzlement and fraud
        - Individuals who have been flagged are given contact information for a human lawyer or legal representative to ensure a just judicial system
        - The list of known criminals will be manually updated to ensure a lack of bias.
    - All legal queries and outputs by official AI legal systems must be reported to a cooperative board (Judge A.I.)

Generative AI

Generative AI

- All generative AI platforms must adhere to the guidelines below :
    - The use of celebrities and public figures in AI content is strictly prohibited and will not produce content if prompted with either a name or an image of restricted identities – journalists may use specialized platforms that protect celebrity dignity.
    - No nudity may be produced by AI – this will result in legal action against the developers and possibly the prompt giver (depending on the extent of the request)
    - Applications must be developed in accordance with the AI platforms to recognize AI generated content and highlight it as such.
        - ***C2PA standard***
- AI systems generating content based on or containing human-made work must credit the original artist and pay up to $3000 to each artist if content is used without consent
    - Artists are encouraged to form paid contracts with AI systems to provide a unique art style to the database while respecting the efforts taken to create the work.
    - AI generated content used for commercial purposes is strictly prohibited without proper accreditation of the inspiring artists, users of the content may face fines up to $3000 if they failed to accredit the work.
    - AI systems are required to inform individuals of the origin of style for the content – original artists
    - AI systems are required to inform individuals regarding the appropriate use of content and accreditation to prevent copyright infringement.

Regulation & Accountability

Regulation & Accountability

- AI systems must meet the following criteria :
    - The purpose of the system is without relation to the desires of the responsible nation
        - The purpose aligns with the statement “AI is a tool for the safety and benefit of all”
    - The training data is subject to review upon request by a regional governing body upon registration of the service :
        - Americas
            - North America : NATDRB (North American Training Data Review Board)
            - South America : SATDRB (South American Training Data Review Board)
        - Asia
            - South-East Asia : SEASTDRB (South-East Asian Sector Training Data Review Board)
            - Central Asia : CASTDRB (Central Asian Sector Training Data Review Board)
            - South Asia : SASTDRB (South Asian Sector Training Data Review Board)
            - East Asia : EASTDRB (East Asian Sector Training Data Review Board)
            - West Asia : WASTDRB (West Asian Sector Training Data Review Board)
        - Africa : ATDRB (African Training Data Review Board)
        - Europe : ETDRB (European Training Data Review Board)
        - Oceania : OTDRB (Oceanian Training Data Review Board)
    - All regional boards work under the UN and are legally binding for the purpose of determining punishments in the case of violations and severe humanitarian or environmental impact.
    - AI systems may not collect data of any user not signed in
    - AI systems must assess the data provided and determine whether it is valuable before asking for formal consent to utilize the data for development and improvement purposes.
    - AI systems approved by any of the aforementioned boards (NATDRB, SATDRB, SEASTDRB, CASTDRB, SASTDRB, EASTDRB, WASTDRB, ATDRB, ETDRB, OTDRB) are automatically approved to be implemented in other countries with a brief single person approval to ensure cultural relevance in training data.
- All AI servers must be located in the same location/area as the registered developers to prevent unfair environmental depreciation
    - OR AI developers using servers outside of the registered nation must pay $0.052 per kilowatt-hour (as proposed by the IMF) to the hosting nation
        - Alongside 1% of the annual product revenue donated to UNEP to continue developing systems to reduce AI environmental impact.
        - AI servers located outside of the developer location, must also provide a one time donation/fee to a national AI/technology institution of their choice to compensate for the lack of data sharing.
- The responsibility for AI systems resulting in violations or damages is as follows:
    - High Risk Systems : Developer fault

        - Indicates a lack of safeguards
    - Mid-Low Risk Systems : National &/or User fault
        - Lack of legal frameworks & user manuals
    - No-Risk Systems : User fault
        - Lack of public awareness of AI risks
    - Humanitarian damages may require further assessment via a consultation of the CSTD

Motions & POIs & POCs

Motions

Motions

- **Motion to extend speaking time to 90 seconds**
- **Motion for __ minutes unmoderated caucus**
- **Motion for __ minutes moderated caucus on the topic of __**
- **Motion for a consultation of the whole for __ minutes on the topic of __**
- **Motion to open debate on resolution __**
- **Motion to adjourn session**
- **Motion to close debate on resolution __**

Topics

- Bridging the Legal Gap in High-Risk Autonomous Systems.
- The Path Toward a Multilateral Treaty on AI Ethics.
- Strengthening Global Protections Against Privacy and Security Breaches.
- Balancing Algorithmic Openness with National Security and Cultural Sovereignty.
- Countering Ethnocentrism and Cultural Bias in Global Algorithms.
- Ethical Guardrails for AI in Combat and Autonomous Weaponry.
- Safeguarding the Human Mind Against Subconscious Algorithmic Manipulation.
- Ensuring Human-Centric AI as a Global Public Good.
- Protecting Intellectual Property and Neural Rights in the Age of BCIs.
- Mitigating the Environmental Footprint of AI without Stifling Growth.

POIs & POCs

POIs

This delegate would like to ask through the chairs,

- How does the delegate plan on ___?
- How does the delegate aim to __?
- Why does the delegate believe __ is necessary?
- What funding does the delegate intend on receiving?
- How does the delegate believe this will have a positive impact?

POCs

This delegate would like to ask through the chairs,

- What does the delegate mean by __?
- Can the delegate elaborate on the impact of __?

- **POI - point of information**
    - **This delegate would like to ask through the chairs ___**
    - Follow up (wait for it to be granted, 1x only)
- **POC - point of clarification**
    - **This delegate would like to ask through the chairs ___**

Bridging the Legal Gap in High-Risk Autonomous Systems

The Development of a Multilateral Treaty or Resolution on AI Ethics

Honorable Chairs, Esteemed Delegates, Germany has long believed in international collaboration – in the face of AI, this remains strong as seen through the EU AI Act of 2024. The Federal Republic of Germany strongly condemns the take over of AI innovation by the USA and China and thus promotes the solution of fostering a multilateral treaty and/or resolution from a holistic view ensuring all cultural, technological, and humanitarian perspectives are considered. Germany believes in the consideration of environmental impacts, privacy and security breaches, impacts on digital sovereignty, and societal stereotypes enhanced by algorithmic biases. Germany proposes the development of a globally applicable template for AI governance including the categorization of AI systems into risk based labels and a global AI submission template used by nations to suggest new AI innovations by providing the purpose, usage, location of servers, reparation and compensation plans for environmental degradation. The delegate of Germany is eager to work alongside other EU nations as well as Australia, the UK, and Japan while fostering communication between continents and regions to provide oversight, support and suggestions – all contributing to creating sustainable and culturally neutral algorithms that will allow humanity to thrive through the automation of mundane tasks. Thank you. The delegate yields the floor to questions.

Strengthening Global Protections Against Privacy and Security Breaches

Balancing Algorithmic Openness with National Security and Cultural Sovereignty

Honorable Chairs and Esteemed Delegates, The delegate of Germany firmly believes that all AI algorithms should be shared with at the very least the governing body if not the CSTD and UNGA to ensure the presence of accountability plans, reparations, sustainability, limited risk, and fail-safe plans as well as proof of non biased training data. The delegate of Germany firmly believes that one of the most optimal solutions to the question of balancing national security and cultural sovereignty is to ensure clear accountability laws, risk categorization systems, acceptable purposes, and the limited collection and use of user data – through a secondary mandatory algorithm built in cooperation between the government and the platform developers, nations can limit the unnecessary collection of data. A secondary data collection algorithm is responsible for determining what data is useful, reliable and ethical for collection and use outside of the contained program. The Federal Republic of Germany is committed to the concept that all data produced by a nation or a nation's private entities is the responsibility of that nation regardless of server location, developer misuse, or user errors. Germany believes that accountability plans should be subject to change but must be registered under either a long-standing and maintained company or an individual. The delegate of Germany strongly encourages all delegates to develop accountability requirements and systems that foster approval for AI platform launches. Thank you. This delegate yields the floor to questions.

Countering Ethnocentrism and Cultural Bias in Global Algorithms

Germany believes that through the development of 10 UN regional bodies responsible for reviewing training data to ensure cultural applicability. Cultural relevance is operationally defined as the implementation of historical context (of which can be proven), cultural norms and standards into the style of responses and content provided as well as the sources used for information compilation. All AI systems are subject to global topic bans (such as those related to disproven theories or events) to prevent subconscious indoctrination. Furthermore, Germany asks that all nations remain conscious of the gaps in technological development across nations and regions – by contributing 0.01% of annual revenue from AI products to the CSTD to redistribute equitable funds to developing nations to kickstart and maintain AI development as Germany believes the implementation of AI is undeniably beneficial to all nations and will create trust through clarity and understanding. Thank you. The delegate yields to questions.

Ethical Guardrails for AI in Combat and Autonomous Weaponry

Honorable Chairs, Esteemed Delegates, Germany is committed to preventing the misuse of AI systems especially in weaponry and military contexts. Through the specified prohibition of lethal autonomous weapon systems to ensure a life is not lost as a result of algorithmic bias or malfunction. That being said, Germany does believe that the use of non-lethal autonomous weapons systems can be used under strict governmental oversight to protect general safety. In the case of rural high-security prisons or high-risk psychiatric wards – non-lethal AWS may be permitted as a last resort on the exterior of the property to ensure no unauthorized entry or exit. Crucially, Germany believes that de-escalation must come first and AI infrastructure should merely be a backup for manual security systems. Furthermore, Germany believes that non-lethal AWS could provide stability to hospital care in conflict zones by disarming or temporarily sedating individuals aiming to attack the hospital – all attempts must be manually approved and complete with a second layer of verification if a large group is detected. Thank you. This delegate yields the floor to questions.

- Ensuring non-lethalness
    - **Article 36 legal reviews** (under the Geneva Conventions)

Safeguarding the Human Mind Against Subconscious Algorithmic Manipulation

Ensuring Human-Centric AI as a Global Public Good

Protecting Intellectual Property, Content, and Neural Rights in the Age of BCIs

Mitigating the Environmental Footprint of AI without Hindering Growth

Honorable Chairs, Esteemed Delegates, Germany acknowledges the severity of the environmental impacts with worsening conditions each minute that pose risks to clean water, crop growth, and nutritional resources. However, Germany does not believe the solution to the environmental degradation is to abolish AI as a whole but rather develop frameworks to ensure proportional reparations and compensation for the use of land and lack of data sharing. Germany supports Japan's views in the condemnation of restricting AI and technological development and therefore proposes to enforce compensation to both the host country for a lack of data sharing and UNEP in order to advance research on environmentally sustainable AI systems. Through the promotion of awareness on the environmental impacts of AI, nations can engage in sustainable development of technology with regards to the manner in which nations wish to use the technology
